

Question	Part	Marks	Criterion	Criterion	Criterion
1	a	5	Summary description of data.	Analysis and discussion of numerical and text fields.	Description of any pre-processing performed.
2	a	4	Extraction of "focus" country and "other" countries as a group".	Quality of comparison between the two groups, including statistical tests.	Effectiveness of graphics or table to enable comparison between the two groups.
2	b	4	Evaluation of the predictive quality of (all) attributes. (focus country)	Quality of the analysis of relative predictability of (all) social organisations.	Effectiveness of graphics or table to enable comparison between the two groups.
2	c	5	Evaluation of the predictive quality of (all) attributes. (other countries)	Quality of the analysis of relative predictability of (all) social organisations.	Sim/diff in results between focus country and other countries discussed.
3	a	6	Analysis of changes in (all) responses for focus country and other countries as a group by wave or year.	Quality of comparison between the two groups, including statistical tests.	Effectiveness of graphics to enable comparison between the two groups. Reasoning for the design.
3	b	6	Analysis of predictive quality of (all) attributes and relative predictability of social organisations over time (focus and other countries).	Quality of comparison between the two groups.	Effectiveness of graphics to enable comparison between the two groups. Graphic has high information density. Reasoning for the design.
4	-	4	Quality of content: summary and narrative.	Quality of video overall.	Quality of speech and presentation.
5	-	6	Quality of writing. Assumptions and findings well explained.	Overall quality of graphics throughout.	Quality and readability of R code. Coding used to automate processes.
